# Correction to: Association among dispositional mindfulness, self-compassion, and leukocyte telomere length in Chinese adults

Shian-Ling Keng<sup>1\*</sup>, Onn Siong Yim<sup>2</sup>, Poh San Lai<sup>2</sup>, Soo Hong Chew<sup>3</sup> and Richard P. Ebstein<sup>4\*</sup>

**Correction to: BMC Psychol 7, 47 (2019)**

<https://doi.org/10.1186/s40359-019-0323-y>

Following publication of the original article [1], the authors reported an error in coding of the Isolation subscale of the Self-Compassion Scale.

Namely, the mean score for SCS-Isolation reported in Table 2 should be 2.79 (SD = .91). Following this correction, the mean score of the overall SCS scale should be 2.96 (SD = .59).

Re-analyses using the newly computed scores showed there was a trend for self-compassion to be positively associated with leukocyte telomere length (LTL),  $\beta = .13$ ,  $\Delta R^2 = .02$ ,  $p = .10$ . The trend remains after including age as a covariate in the analyses,  $\beta = .13$ ,  $\Delta R^2 = .02$ ,  $p = .09$ . The association between the isolation subscale and LTL remained insignificant (with or without including age as a covariate) following the re-analyses.

The authors thank you for reading this correction and apologize for any inconvenience caused.
